AMENDMENTS TO THE SPECIFICATION

Please amend the specification as shown below.

Please amend the paragraph beginning on page 42, line 3, with the following amended paragraph:

The system log type 0 in Fig. 11 has a total area of 66,816 bytes. The data size of the entire system log is determined in units of frames (see Fig. 6D) on the magnetic tape. In practice, hundreds of frames each taking on the structure of Fig. 11 are written consecutively on the tape to make up the system log. That is, the same system log data structured as shown in Fig. 11 are written [may] many times over to constitute the system log area on the magnetic tape. This also applies to the system log type 1 depicted in Fig. 12.
